OPAL

OPERATING PLATFORM ALSTEF GROUP

ALSTEF GROUP

AN END-TO-END INTRALOGISTICS SOFTWARE SUITE

Leveraging more than 40 years of know-how and an innovative R&D program, OPAL is a unified software suite, which ensures the end-to-end control of your intralogistics operations: flow management and control, automated and manual storage, AGV-AMR fleets and order picking.

| Reception | Line-side supply | End of line evacuation | Storage and inventory | Order picking | Loading and shipping |

A UNIQUE MANAGING PLATFORM

The software suite is based on an **ergonomic user interface** and on a **secure and scalable architecture** to bring you performance, interoperability and functional innovations.

OPAL meets the business challenges of a logistics installation, providing speed, precision and traceability, while reducing preparation times. Efficient and agile, this suite ensures an **optimized management of each activity in real time**.

Thanks to its wide connectivity, OPAL **interfaces with all information systems on the market**, in order to provide a global intralogistics vision. The software suite is also designed and developed to meet the **quality and cybersecurity requirements**.

A MODULAR APPROACH AROUND A MAIN WMS

| CONTROL | ANALYTICS | NOTIFY | IT MONITORING |

OPAL Control supports your site operation by optimizing all the movements of handling equipment, while taking into account your business rules and constraints. It offers a visualization of your flows to follow in real time the activity of your installation.

Around the main WMS, three modules complete the solution, offering a functional coverage rich in execution and management.

- **OPAL Analytics** includes customizable operational dashboards (KPIs),
- **OPAL Notify** offers real-time notification of events,
- **OPAL IT Monitoring,** a tool for tracking incidents and IT resolution.
